

Schüco Living Series

Premium vinyl windows – The Perfect Choice for Your Home

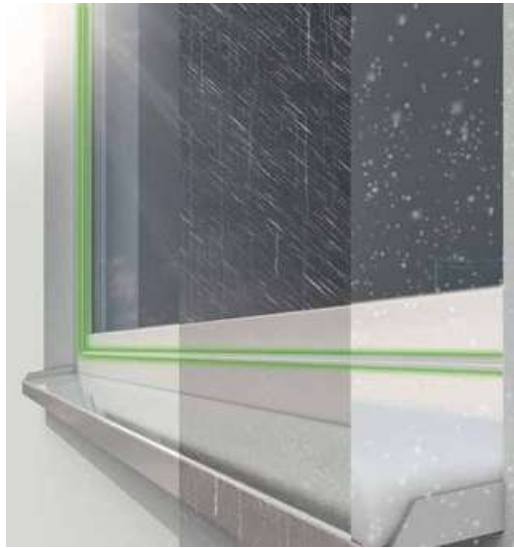

SCHÜCO

SCHÜCO LIVING SERIES

windows with quality and comfort

Modern vinyl windows now boast a lifespan of 40 years or more. However, their performance relies on the durability of every component—especially the window seals, which are crucial for maintaining functionality over time. Schüco LivIng Classic windows deliver exceptional quality in every detail, ensuring lasting performance you can rely on.

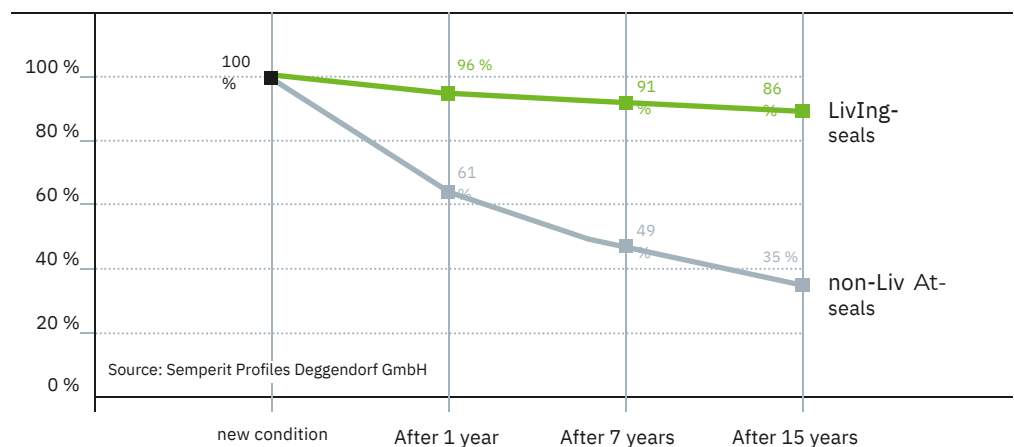

QUALITY DOWN TO THE DETAIL

In window construction, there are high demands for airtightness, long-term reliability, and weather protection. High-quality seals provide exceptional resilience*, ensuring a perfect seal throughout the window's lifespan. This eliminates the need for time-consuming and costly seal replacements.

Schüco LivIng Series windows feature the latest sealing technology, delivering exceptional sealing performance even in the critical corner areas. This ensures one thing above all for you: maximum living comfort and an enhanced feel-good experience.

The comparison of recovery behavior* between Schüco LivIng seals and non-LivIng seals clearly demonstrates that the high-quality material of LivIng functional seals maintains its superior sealing effect, offering lasting protection against drafts, cold, moisture, and noise. In contrast, the alternative seal loses much of its elasticity within the first few years and becomes brittle. After approximately 7 years, its sealing effect is reduced to just around 50%.

SCHÜCO LIVING SERIES

A Sense of Security

To ensure comfort and security in your home at all times, investing in your own safety is essential. Schüco LivIng Series windows come with the latest locking systems and a variety of customizable features, allowing you to tailor your home's security to your personal needs.

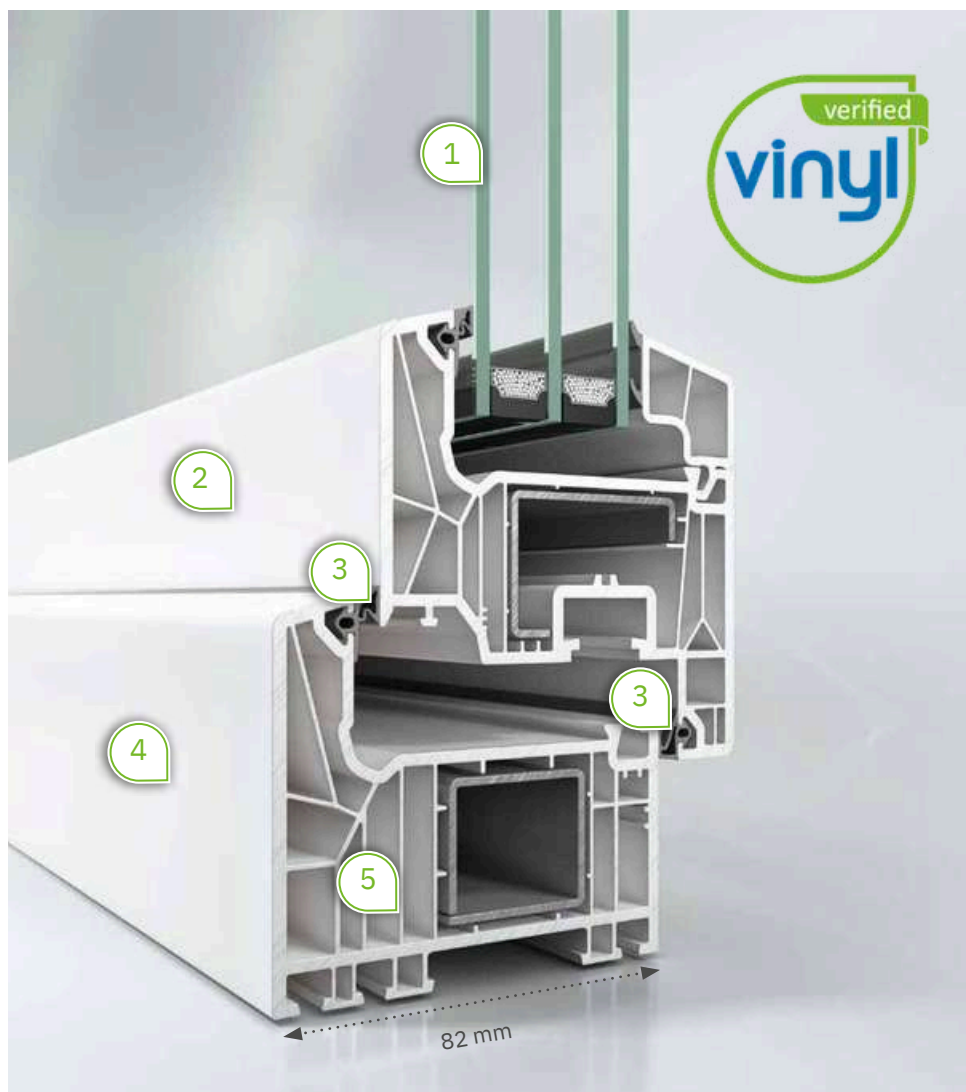

SCHÜCO LIVING SERIES

Outstanding Energy Efficiency

The heat stays inside, and the cold stays outside. With seven chambers in the frame profile, Schüco LivIng Classic windows offer thermal insulation that meets passive house standards—something that was once only achievable with complex additional measures.

The excellent thermal insulation properties of Schüco LivIng Classic windows provide true comfort. Even in the harshest winter, the temperature on the inside of the frame stays close to the interior temperature, preventing noticeable drops. This helps to effectively prevent drafts and condensation over time. Additionally, minimal heat energy is lost through the glass, while valuable solar heat is allowed to enter through the window surfaces.

By replacing old windows with Schüco LivIng Classic windows, you can significantly reduce energy consumption. Not only will you save on heating bills, but you'll also lower CO₂ emissions. This leads to reduced heating costs while contributing to climate protection.

- 1 Custom IGU options for insulating and functional glass with thicknesses ranging from 16 mm to 54 mm.
- 2 The Classic sash geometry, with its clean and timeless lines, perfectly complements the demands of modern architecture.
- 3 Two sealing levels ensure reliable protection against wind, rain, and noise.
- 4 Slim profile widths allow for maximum light entry and high solar energy gains.
- 5 The 7-chamber profile system offers excellent insulating properties, achieving U-values as low as 1.0 W/(m²K).

300+

INDIVIDUAL DESIGNS FOR YOUR SCHÜCO LIVING SERIES

The Schüco UnlimitedFinish film range offers over 300 plain, metallic, and wood decors, providing a wide selection to suit every taste. Windows not only define the exterior facade but also influence the interior atmosphere. The Schüco LivIng Classic frame surfaces can be customized in different colors inside and out, allowing you to create contrasting color accents that reflect your personal living style.

SELECTED by Schüco

The latest trend films from the Schüco Selected Edition offer a unique look, impressing not only with their high-quality surface appearance but also with their exceptional texture.

SCHÜCO LIVING SERIES

Energy Efficient and Sustainable

360° sustainability – from concept to recycling: Sustainability is deeply embedded in Schüco's corporate culture. Schüco develops high-quality, resource-efficient, and energy-saving products and services that set industry standards, allowing Schüco partners to create reliable and lasting value.

Sustainability involves planning, constructing, and operating a building in a way that is ecologically, economically, and socio-culturally responsible. Achieving this requires high-quality, innovative, and resource-efficient products and solutions.

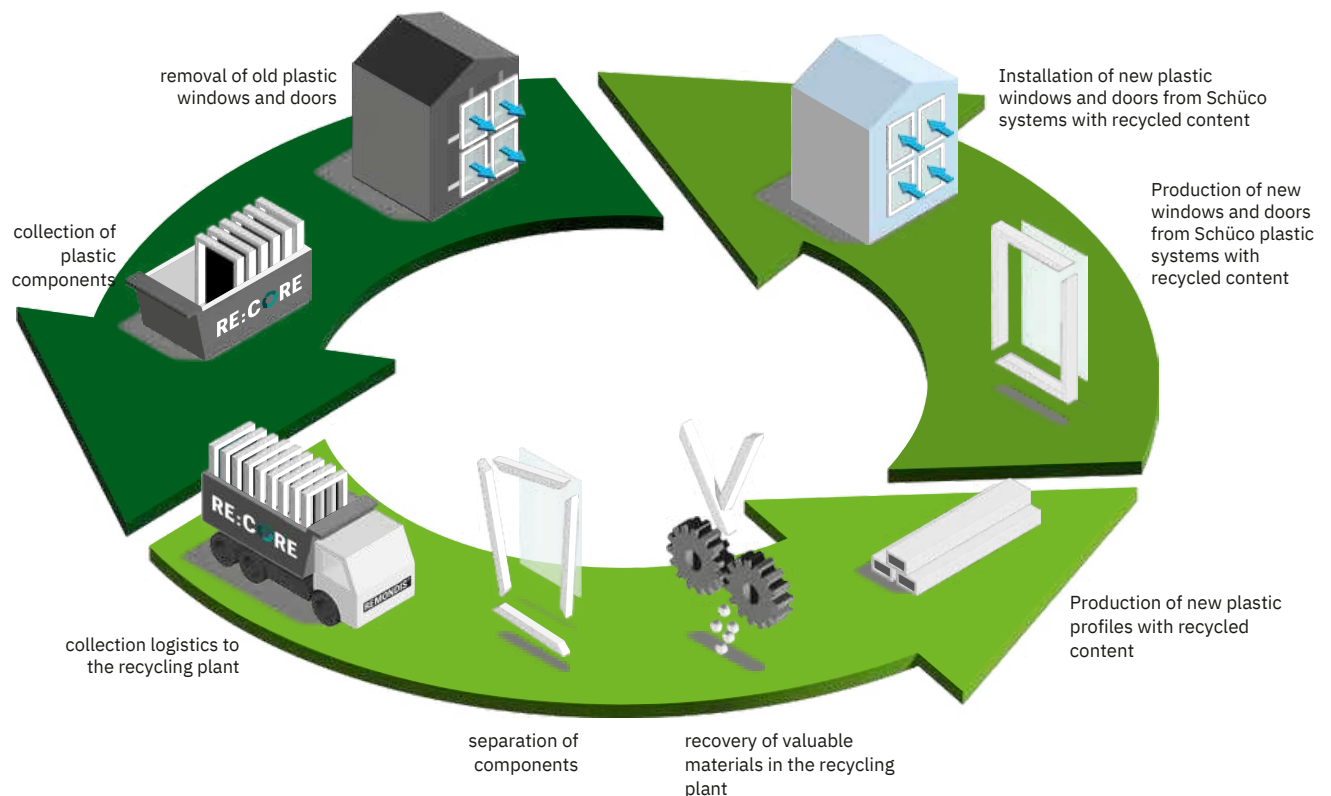

Schüco systems are designed to excel in several key areas:

- Usability
- User comfort
- Energy efficiency
- Climate protection

The range of Schüco PVC-U systems helps reduce CO₂ emissions through energy efficiency, thereby conserving natural resources. Additionally, all Schüco PVC-U systems are fully recyclable. We fulfill our responsibilities in climate and environmental protection through our dedicated commitment to sustainability.

In collaboration with Rewindo and our recycling partner RE:CORE, we are committed to ensuring that windows and doors are properly recycled after use. Our goal is to return the raw materials to the production process without any loss of quality.

But that's not all: We also minimize the environmental impact of the production process through various measures, such as using the latest energy-efficient, energy-saving machinery and sustainable production facilities.
